

## **PRESS RELEASE**

Orgatec 2022

### **If you want to move things forward, you have to be mobile - ONGO® Pop-Up Office turns office structures future-proof.**

Stuttgart, 20 October 2022. ONGO® has made good use of the break caused by Corona and is presenting its ONGO® Pop-Up Office as an innovative workplace-concept for more mobility in the office and ONGO®Wing, the first office swivel chair especially for the height-adjustable desk.

The **ONGO® Pop-Up Office**, quite unique in the industry, was developed to make office structures more flexible. A look at the transformation of our production society towards a knowledge-based society shows: classic work structures are changing rapidly and require employees to work more creatively, flexibly and spontaneously in teams that are constantly regrouping. To be prepared for this future, companies must create the conditions: maximally mobile workplaces. This is exactly what ONGO® offers the right solutions for.

"Our office furniture make the workplace mobile, support spontaneity in teamwork and create much freedom for employees, which has been proven to benefit productivity. With our new ONGO®Pop-Up Office, companies can easily make their offices more flexible without having to throw out all that is there now. Our modular system allows a successive expansion into a completely movable office," says Eberhard Lenz, Managing Director of ONGO®.

The ONGO® Pop-Up Office comprises three building blocks: Active Sitting, Mobile Desks and Agility Boards, that are movable stools and chairs that can be hydraulically changed from ordinary sitting to standing height. Rolling tables, in which stools are hung or placed, so that both can be easily taken to the teamwork. And mobile privacy and noise protection boards that simultaneously act as white and pinboards or as monitor units for video conferencing.

The **ONGO®Wing** is the first office swivel chair specifically designed for working at height-adjustable desks. This makes the ONGO®Wing much more than just another office chair, because with its multi-dimensional mobility it creates a novelty in the history of sitting, namely the infinitely variable expansion of the height range from the usual sitting to the standing height. To this end, two independently adjustable gas springs work together and a new type of seat that transforms from a comfortable seat to a dynamic standing saddle with folding wings - hence the name. This makes the ONGO®Wing the perfect solution to benefit from the advantages of height-adjustable desks at work.

The ONGO®Wing goes back to early ideas by Eberhard Lenz and was further developed with the designer Andreas Krob and the constructor Joachim Brüske. Both are working internationally for leading companies in the field of high-quality contract furniture.

The ONGO®Wing is available in different configurations. With a base price of € 795, - it is positioned for the broad market and is aimed at employers and private users who are serious about active sit-standing.

#### The Company

Agility is already embedded in the name of the young company founded by the architect and designer Eberhard Lenz in Stuttgart, because ONGO® comes from "on the go": in motion. Today, ONGO® embodies agile, collaborative and sustainable work more consistently than most brands. And of course, as a pioneer, ONGO® is always moving forward – for more and more motivation and productivity in working life.

**At ORGATEC you will find ONGO® GmbH in Hall 6, Stand C 093.**
